

Slim Metal Potentiometer Knob - 10mm Diameter x 15mm - T18

PRODUCT ID: 2057

Description

This slim and modern potentiometer is small and compact, yet looks good and has a nice feel. We hand selected the best knobs for your project in different sizes and varieties. This one is the **Slim Metal Knob 10mm diameter x 15mm Tall (T18 Splines)**.

It's a brushed aluminum knob with a shiny black (anodized?) coating. It kind of looks like the type of knob you'd find in a very fancy, modern kitchen. There's a silver mark on the black finish so you can know where you are and figure out where you're going. It's a good knob if you're looking for something basic and subtle and it's super tiny and subdued, we also have a shorter version.

This knob will not work on our Rotary Encoder (which has a D shaft)! It will work, however, on all of our Potentiometers (which have T18 shafts)

Technical Details

- Diameter: 10mm / 0.4"
- Height: 15mm / 0.6"
- Weight: 1g
